Could Your Surveying Firm Benefit From Using Point Cloud Management Software?

Navigate through our checklist to see how you could deliver more value to your engineering, procurement, and construction clients with JP Interactive Viewer:

YES	NO	
☐	☐	Are you currently using software that allows you to store and manage large amounts of point clouds for your clients?
☐	☐	Are the software programs you're currently using cost effective?
☐	☐	Do you have a visualization tool that allows you to easily view scan results, manage 3D assets, and attach documents?
☐	☐	Can you visualize your scan results in a user-friendly, easy-to-navigate environment using your current point cloud management software?
☐	☐	Can your clients easily create a new BIM model based on your point clouds with your current visualization software?
☐	☐	Are your clients able to easily convert large 3D datasets, such as point clouds and BIM models, into actionable insights with your current visualization software?
☐	☐	Can you easily share large point cloud and BIM files and other 3D datasets with your clients and team members?
☐	☐	Are you using a single software program to view, manage, and share your point clouds with your clients and customers?
☐	☐	Is your current software easy for your clients to navigate?
☐	☐	Can you quickly and efficiently deliver your projects in a platform that brings value to your clients using your current software?

If you answered yes to most of these questions, your organization is on the right track but could benefit from a consultation with JP Global Digital to identify areas where JP Interactive Viewer can help you more efficiently manage point clouds and collaborate with your EPC clients. If you answered no to two or more questions, your surveying firm could perform much better with our software. **Contact us today** or **request a free trial** to see how JP Interactive Viewer transforms your business.
